PRESS RELEASE

Frontline Introduces CareLINE Clinic Management System in Line with the Chronic Disease Management Programme

Singapore, 1 September 2006 – Frontline Technologies Corporation Limited ("Frontline"), a leading IT services provider in Asia, has launched CareLINE Clinic Management System ("CareLINE CMS"), a web-based, fully-integrated clinic management system that focuses on improved clinic resource and patient management through automation.

The system allow doctors who are General Practitioners ("GPs") to participate in the recently-announced Chronic Disease Management Programme in the submission of Medisave claims and the relevant patient health records to MOH and the Central Provident Fund Board ("CPF").

CareLINE CMS is part of the CareLINE suite of information systems developed by Frontline's subsidiary, Frontline Solutions Pte Ltd ("Frontline Solutions"), for healthcare organisations. CareLINE caters to the specific needs of each operational unit within the healthcare organisation to help enhance workflow and productivity, thus enabling improved, coordinated healthcare services for the entire patient care cycle.

Key Benefits of CareLINE CMS

With CareLINE CMS configurable resource management feature, doctors can streamline the processes of their clinic operations and better manage patient records. The modules in CareLINE CMS allow doctors to achieve cost savings with an automated, token-free billing and claims function that reduces error of manual entry, and through better inventory and resource management. Patient data and records can also be shared within the same group of clinics without compromising on confidentiality and consistency of information.

Ms Shirley Wong, Managing Director of Frontline Solutions, said "CareLINE CMS provide doctors with a complete, automated system that will allow them to accord more time on quality patient care. It will also provide doctors who are GPs with the ability to seamlessly update and retrieve patients' health records and ease the submission of claims for patients suffering from the list of identified chronic diseases, who are using Medisave to help pay part of the outpatient cost of their treatment."

Additional Perks for Family Physicians Using CareLINE CMS

In support of the national effort in the outpatient treatment of patients with chronic diseases, Frontline is partnering SingTel to offer unlimited 512 kbps broadband Internet connection to Family Physicians who sign up for CareLINE CMS. The broadband service will be bundled with the CareLINE CMS solution and offered free to doctors for the first year. This will help facilitate their participation in the CDM programme as more chronic diseases are being covered over the two stages in the implementation of the scheme, beginning October 2006.

The launch of CareLINE CMS will enhance Frontline's presence in the healthcare arena, and Frontline will continue to build on the intellectual property as well as consider possible opportunities for commercialisation, both locally and in the region.
